

Site Technical Guide

1. Clone the site repository to any directory on your computer
2. Navigate to the site directory
3. Create an `env.env` file in the site directory
4. Edit the `env.env` file as follows:

```
APPID= # Insert the WeChat Application ID
APPSECRET= # Insert the WeChat Application Secret
CACHEFILE= # Insert the name for the cache file. This is relative to the `src` directory
ENVID= # Insert the WeChat CloudBase environment ID
```

5. Run `docker-compose up`
6. Navigate to `localhost:8080/validate.php`
7. Enjoy using the website!
